EVIDENCE REVIEW

CoC Governance: What the Research and the Data Show

Research on board and CoC governance, and an analysis of HUD data on CoC structure, funding and performance

Part 1 — Page 3
Research brief: nonprofit board effectiveness and Continuum of Care governance
What published studies show about how boards and CoCs work, what goes wrong, and what CoC governance needs to provide.

Part 2 — Page 11
HUD data analysis: CoC structure, funding and performance
Whether funding growth, UFA status, the type of Collaborative Applicant, HMIS coverage and housing capacity are related to performance, using HUD data for 375 CoCs.

Part 3 — Page 22
Consistent improvers: governance, HMIS coverage and award history
The three CoCs that improved most consistently year over year: their governance, HMIS coverage, strategy and award history.

OVERVIEW

About this document

This document brings together three pieces of work that ask the same question: what is known about how the structure of a Continuum of Care relates to how well it performs. Part 1 reviews published research. Part 2 tests the question with HUD data. Part 3 looks closely at three CoCs that improved most consistently. The appendix shows the tables behind Part 2.

This report was prepared by OnPoint Solutions LLC. An AI assistant was used to support data analysis and formatting. All figures come from the HUD data and CoC documents cited.

How the two parts fit together

Topic	Part 1: what the research says	Part 2: what the HUD data show	Reading them together
Governance structure	No single board governance model has been shown to produce better results (Gill et al., 2005). How a board works matters more than how it is set up.	UFA designation shows no performance advantage (18 UFAs vs. 357 other CoCs; Section 3.3). The leanings without significance tests go both ways (Section 3.5).	Neither source supports choosing a structure for an expected gain in performance.
Who leads the CoC	Participant-led and government-led CoCs differed in chronic homelessness trends (2009-2014) only through provider influence (Mosley & Park, 2017). Nonprofit leadership did not predict permanent supportive housing availability (R C & Jang, 2025).	Among Major City CoCs, nonprofit-led CoCs had faster award growth and a better first-time-homeless trend, but the pattern is not robust across all CoCs once adjusted (Section 3.2). Read without significance tests, neither type leads on every measure (Section 3.5).	Lead agency type alone does not explain performance. The research points to how much influence providers keep, which the HUD data used here do not measure.
Funding	Reported improvements in system-level performance showed little association with annual funding amounts (Coutin, Musso & Stanley, 2025).	Award growth mostly tracks national program growth and is weakly or inconsistently related to outcomes (Section 3.1).	Funding level and growth are weak proxies for performance.
Data and monitoring	HUD's performance system built CoCs' commitment to data and performance management (Coutin et al., 2025). Effective CoC governance uses system performance data at the board level.	HMIS participation changes how measures read: higher coverage goes with higher measured returns to homelessness (Section 3.4).	Data quality and coverage are a governance issue for a CoC board.
Board practices	Role clarity, teamwork, a strong chair, strategic engagement and regular self-assessment distinguish effective boards. Delegated work needs regular reporting to the board.	Public data do not record how a CoC board operates.	Review governance on decision-making, delegation, monitoring and data quality (Part 2, Section 4).

How to use it

- **Part 1 (research brief):** start here for the evidence on how boards and CoCs work and what governance should provide.
- **Part 2 (HUD data analysis):** read Section 1 for the findings (Section 3.5 shows them without significance tests) and Section 4 for what they mean for CoC governance work. Section 2.1 explains the statistics in plain language.
- **Part 3 (consistent improvers):** read the callout, then Section 6 for award history.
- **Appendix:** consult when you need to see how a number in Part 2 was calculated or which CoCs were classified how.
- **Companion tool:** the separate CoC Board Self-Assessment, for how a board operates.

PART 1 | RESEARCH BRIEF

Nonprofit Board Effectiveness: What the Research Shows

Summary of Findings

Across the studies reviewed here, spanning three decades, the research finds that board effectiveness and organizational effectiveness move together, but it does not support a universal checklist of "best practices." Functional boards are distinguished mainly by how they behave: clear roles, cohesive teamwork, engaged chair leadership, active strategic work and regular self-assessment.

The link shows up in several ways. Board members' scores on six board competencies correlated with organizational financial performance (Jackson & Holland, 1998). Boards' governance self-ratings correlated with outside observers' ratings of organizational effectiveness (Gill et al., 2005). Especially effective organizations had more effective boards, and those boards used more recommended practices (Herman & Renz, 2000).

Dysfunction is more often a failure to act than overreach. The most common documented problems are inactive boards, role ambiguity, weak member engagement, insular composition, poor chair leadership and boardroom conflict.

Most findings rest on self-reported perceptions and correlations. **A longitudinal test of "correct" practices found that adopting them did not by itself improve later board effectiveness** (Herman & Renz, panel study). The study measured the same 44 organizations twice. At the second measurement, how many recommended practices a board used was not related to how effective the board was judged to be.

What makes boards work

Six factors appear in more than one of the studies reviewed.

1. **Role clarity.** Understanding of roles and responsibilities was one of two characteristics most strongly tied to perceived board impact (In Trust summary). Role understanding had the strongest effect on external board performance, including fundraising and community outreach (Bernstein, Buse & Slatten, 2015). Boards with better role understanding spend more time on strategic, future-focused work (LWI 2023 survey, as summarized by Nonprofit Law Blog).
2. **Working as a team.** In the same BoardSource 2017 data, the other characteristic most strongly tied to perceived impact was the board's ability to work collaboratively toward shared goals. Chair leadership, meeting practices and group dynamics are positively associated with perceived effectiveness (Van Puyvelde, Brown, Walker & Tenuta, 2018). Boards with less negative conflict were more active in governance, and active governance was associated with higher student math and reading proficiency (UW–Milwaukee, 2018).
3. **Strategic engagement and a shared vision.** The strongest predictors of organizational performance were board involvement in strategic planning, a CEO-led common vision, good meeting management, a pro-change core group and low internal conflict (Bradshaw, Murray &

Wolpin, 1992, as reviewed in Gill et al., 2005). Cornforth found a similar pattern in England and Wales: shared vision with management and periodic joint review (Cornforth, 2001).

4. **The right people with the time to serve.** Members having the time, skills and experience to do the job was important in explaining board effectiveness. Stanford's authors recommend composing boards for skills, resources, diversity and dedication (Stanford GSB, 2015). Board composition also affects board performance, and board chairs bridge board and organizational outcomes (Sessler Bernstein & Fredette, 2023).
5. **Regular self-assessment.** Boards that assess themselves regularly receive higher grades across all areas of performance (LWI 2017, In Trust summary). CEOs whose boards completed a formal evaluation in the past three years reported higher-performing, more engaged boards (BoardSource 2015 release).
6. **Sustained board development.** A demonstration study found significant improvement in boards that undertook substantial development activities, compared with boards that did not. The authors concluded gains last only when the work becomes a regular part of board activity (Holland & Jackson, 1998, as reviewed in Gill et al., 2005).

Two factors that are often assumed to matter showed **no measurable effect** in the Gill study: **the governance model a board uses (traditional, Policy Governance, or results-based), and the size of the board, budget or staff**.

What makes boards not work

A recurring finding is under-engagement rather than interference. Governance problems are also common: 69% of 924 nonprofit directors surveyed said their organization had faced a serious governance-related problem in the past 10 years, and most boards lacked formal governance structure and process (Stanford GSB, 2015).

Nine patterns of dysfunction are documented in the studies reviewed.

1. **Inactive board.** In 9 of 11 responsibility areas, most boards were inactive or only somewhat active (Ostrower overview). Among midsize nonprofits, only 1 in 5 boards was actively engaged in fundraising (midsize study).
2. **Role ambiguity and low peer confidence.** Most members receive neither training nor feedback, and the resulting confusion about their role lowers commitment (Wright & Millesen, 2008). A majority of directors do not believe fellow members are very experienced or engaged (Stanford, 2015).
3. **Weak grasp of mission and strategy.** Over a quarter of directors lack deep understanding of mission and strategy, and nearly a third are dissatisfied with the board's ability to evaluate performance (Stanford, 2015).
4. **Neglected board development, turnover and recruitment strain.** Recruitment, orientation, team building and self-assessment was the lowest-rated of 12 governance areas (Gill et al., 2005). Annual board turnover was negatively correlated with governance scores (Gill et al., 2005). 58% of CEOs found board recruitment difficult, up from 44% in 2012, and meeting attendance was declining (BoardSource 2015 release).
5. **Weak planning, monitoring, risk and executive oversight.** Members rated these four areas lower than other governance areas and identified them as needing improvement (Gill et al., 2005).
6. **Internal conflict.** On Minnesota charter school boards, boards with more negative conflict were less active in key governance areas, and less active governance was associated with lower student

math and reading proficiency (UW–Milwaukee, 2018). Conversely, low internal conflict was among the strongest predictors of organizational performance in a survey of about 400 Canadian nonprofits (Bradshaw, Murray & Wolpin, 1992, reviewed in Gill et al.).

7. **Fundraising crowding out strategy.** Boards that put fundraising above all else do so at the cost of strategy, relevance and impact (LWI 2021, as summarized by Nonprofit Law Blog). There is some evidence that executive directors push boards toward fundraising instead of monitoring (O'Regan & Oster, 2005).
8. **Insider deals.** Almost half of large nonprofits had insider deals with board members, and one-third occurred without prior board approval (Ostrower, 2007, via ACTA).
9. **Disconnection from community.** Boards are disconnected from the people they serve, and recruitment practices do not match diversity goals (LWI 2021, as summarized by Nonprofit Law Blog).

Governance structure

How a board is set up matters less than how it works. No single governance model has been shown to produce better results, but a few structural choices recur in the research as helping or hurting.

The typical board has 15 members (median 13), 72% of boards limit consecutive terms, boards average 4.5 standing committees, and 94% have a written conflict-of-interest policy. Executives say 38% of meeting time goes to routine reports (Leading with Intent 2017).

1. **Governance model.** No model wins. Gill and colleagues found no relationship between the model a board uses and board or organizational effectiveness, and most boards use hybrids (Gill et al., 2005). Nobbie and Brudney found no evidence that Policy Governance produces better outcomes than other approaches (Renz, Nonprofit Quarterly), although among boards already using it, fuller implementation was linked to better goal achievement and CEO job satisfaction (Nobbie, dissertation). In case studies of 20 Canadian nonprofits, boards that fully implemented Carver's model reported distance from the organization, board alienation and backlash, while hybrids "seem to work well enough, certainly better than trying to follow any one prescriptive model" (Gill, 2002).
2. **Board size.** Not a driver of effectiveness. Board size did not detract from engagement, and where it had an effect it was positive for fundraising, public education and advocacy (Ostrower, 2007, via Newswise). Size was not correlated with board or organizational effectiveness (Gill et al., 2005). One study suggests a trade-off: larger boards bring more fundraising capacity but weaker incentives for managers (Aggarwal, Evans & Nanda, 2006).
3. **Chief executive as a voting board member.** Consistently negative. It was negatively associated with having an outside audit and conflict-of-interest, whistleblower and document-retention policies (Ostrower, 2007, via Newswise). Boards with the chief executive as a voting member generally performed less well on financial oversight, and "no board activities are positively associated with having the chief executive as a board member" (Renz). The two summaries report different shares of boards with this arrangement (21% and 33%); the original report was not available to confirm which is correct.
4. **Committees and term limits.** Widely used but untested. The most common committees are **executive (76%), finance or finance/audit (76%) and governance or nominating (70%),** and only 47% of boards document committee roles in a charter (Leading with Intent 2017). No studies reviewed show that committee structure or term limits, on their own, improve performance.

5. **Recruitment and compensation.** Recruiting mainly through friendship with current members was negatively associated with board activity in every role except fundraising (Ostrower, 2007, via Newswise). The 2% of nonprofits that paid board members were no more likely to engage in financial oversight, policy-setting, planning, program monitoring or CEO evaluation (Nonprofit Law Blog).
6. **Conflict-of-interest and accountability policies.** Often missing. 21% of nonprofits bought or rented goods, services or property from a board member or affiliated company, yet only half had a written conflict-of-interest policy (Ostrower, 2007, via Nonprofit Law Blog). BoardSource reports 94%, but its survey drew on a different sample, so the two figures are not directly comparable.
7. **Orientation and the chair.** Both matter. Board orientation was directly linked to overall board performance (Brown, 2007, summarized by Renz). The board chair role significantly affects board performance, and trustworthiness, intelligence and good listening skills were the highest-rated chair qualities (Harrison & Murray, 2007, via Foraker; Harrison, Murray & Cornforth, 2012).
8. **Fit to context.** Board roles shift with organization size and environment. Boards of very large organizations tend to be less involved in external roles, and boards with paid CEOs focus more on financial and CEO-performance monitoring (Ostrower & Stone, 2010; Renz). In the Canadian case studies, hands-on involvement became harmful when board members took over program management in a larger organization, leading to repeated executive turnover (Gill, 2002).

What board governance needs to provide

The following is a synthesis of the findings above.

- A clear, written division between the board's role and management's role, revisited as the organization grows.
- Independent oversight: the chief executive is not a voting member, a conflict-of-interest policy with annual disclosure and recusal, an outside audit, and board review of the Form 990.
- A structure chosen to fit the organization, rather than a branded model adopted wholesale.
- Recruitment for skills and reach rather than friendships, followed by a real orientation.
- A deliberately chosen chair, with a job description and a succession plan.
- Meeting time spent on decisions and strategy rather than routine reports.
- Regular self-assessment that the board acts on.

What has changed since 2015

Most of the outcome research in this brief is more than ten years old, and no newer study re-tests it. Newer evidence comes mainly from descriptive surveys. They show shifts in how boards are set up, but no measurable improvement in overall board performance.

What has changed

- **Board diversity is rising slowly.** People of color were 16% of board members in BoardSource's 2017 data and 22% in the 2019 survey published in 2021 (Nonprofit Law Blog). In 2023, board chairs were 77% White and chief executives 84% White (Leading with Intent 2023).
- **Leaner, more formal structure.** Standing committees fell from an average of 6.6 in 1994 to 4.5 in 2017, boards without term limits fell from 37% to 28%, and average board size declined (Leading with Intent 2017). These trends began before 2015.

- **Conflict-of-interest policies are nearly universal.** 94% of boards had one in 2017 and 96% in 2021, and 90% had an annual disclosure process in 2021 (Leading with Intent 2021).
- **More advocacy and wider recruitment.** BoardSource's 2021 report describes boards as more engaged in advocacy and more open to non-traditional recruitment than in earlier studies, without giving figures (Leading with Intent 2021).
- **More attention to purpose.** BoardSource's takeaways from its 2023 survey say boards now rank strategy, not fundraising, as their highest governance priority, and that **purpose-driven governance is replacing compliance-driven governance** (as summarized by Nonprofit Law Blog).
- **Self-assessment is becoming standard among foundations.** In a 2025–26 survey of 63 foundations, 92% assess overall board effectiveness and 63% assess board culture (NonProfit PRO). The sample is small and limited to foundations.

What has not changed

- **Overall performance.** BoardSource found no significant difference in board performance ratings in 2021 compared with previous studies (Leading with Intent 2021).
- **Fundraising.** It remains the lowest-rated board responsibility, as in every BoardSource study (same source).
- **CEO evaluation.** This may have slipped. In 2017, 60% of chief executives had been evaluated within the past year and 15% had never been evaluated (Leading with Intent 2017). In 2021, the figures were 53% and 21% (Leading with Intent 2021).
- **Community connection.** In 2021, 49% of chief executives said their board lacks the right members to build trust with the community (same source).

Caveats: BoardSource's 2021 report is based on data collected in 2019, before the pandemic, so the newest full dataset is now seven years old. The 2023 results are available only as briefs and dashboards, and results from the 2026 survey have not yet been published.

Continuum of Care governance

Research on CoC governance is small. It studies the CoC as a collaborative network rather than the CoC board itself, and no study tests CoC board practices, such as meetings, chair leadership or self-assessment, against outcomes. Eight findings stand out.

1. **Provider influence.** In a national survey of 313 CoCs combined with HUD data over time, the degree to which providers actually shape decisions was directly linked to reductions in chronic homelessness. Provider influence also carried much of the effect of governance structure and funding growth. The authors conclude that collaboration improves client outcomes when it is genuinely collaborative (Mosley & Park, 2022).
2. **Shared vision and shared power.** Interviews across 18 CoCs identified three recurring challenges: lack of capacity, difficulty building momentum for innovative practices, and inequities across service populations. Leaders addressed them by promoting a collective vision and sharing power (Mosley, 2021).
3. **Board size.** Across 343 CoCs, federal funding, a favorable political climate and a larger board were significant predictors of permanent supportive housing availability. Nonprofit leadership of the CoC was not (R C & Jang, 2025). This differs from the general nonprofit research, where board size showed no effect.

4. **Government and mainstream systems.** In a survey of 213 CoCs, only 28% were part of municipal government, and nearly all reported limited participation from local and state government, police and health care (Klasa et al., 2021).
5. **Performance data.** Reported improvements in system-level performance showed little association with annual funding amounts. HUD's performance system did build CoCs' commitment to using data and performance management practices (Coutin, Musso & Stanley, 2025).
6. **Planning depth.** In HUD's early evaluation of 25 CoCs, one-third did intensive, multi-year strategic planning, which in a few cases began to affect chronic homelessness. The rest did basic, application-focused or year-round planning (Burt et al., 2002, as summarized by HUD). This evidence is older.
7. **Power imbalance.** In preliminary research presented in 2019, 72% of CoCs surveyed named power imbalance among members as a major challenge (Jang & Valero, 2019).
8. **Lived experience.** The available evidence is practitioner survey data and commentary rather than controlled research. It reports that people with lived experience are often added to committees to "check a box" without real influence over decisions (National Alliance to End Homelessness, LEARN essay).

Committees and delegation in CoCs

No study examines CoC committees themselves: how many a CoC has, what they are delegated, or whether they work. The closest research looks at who runs the CoC and what happens when oversight of delegated work lapses.

1. **How CoCs are run.** Of 330 CoCs coded using the standard network-governance framework, 57% are run by a separate administrative organization, 41% by a lead organization that is also a network member, and 2% by shared governance among members. The running body is a nonprofit in 48.5% of CoCs, a government agency in 29.5% and a coalition in 22%. The study is descriptive and does not link governance form to outcomes (Jeong, 2021).
2. **Structure matters through who holds influence.** Structure affected chronic homelessness trends from 2009 to 2014 only through provider influence. Participant-led CoCs were indirectly associated with a 7.3% decrease in chronic homelessness, and government-led CoCs with a 5.8% increase, because providers there had less influence over planning (Mosley & Park, 2017 conference paper). The 2022 journal version confirms the same mediating role of provider influence.
3. **Staff support can crowd out participation.** Mosley's early findings suggested that greater staff support often leads providers to step back (SSA Magazine, 2017). This is preliminary research.
4. **When monitoring of delegated work lapses.** HUD's Inspector General found that the Los Angeles Homeless Services Authority, the CoC lead agency, passed 101 of its 111 CoC grants to subgrantees, did not monitor subgrantees during the grant term, and lacked procedures for executing agreements on time (HUD OIG, 2022). This is a single audit, not research, and it did not examine the CoC board.
5. **Broader network research does not fill the gap.** A review of network-governance studies found the literature "practically silent" on the effectiveness of lead-organization governance. Comparisons of networks run by an administrative organization found no significant performance differences, while one longitudinal study found performance rose as control of resources became more centralized. None of the reviewed studies covered homelessness networks (Wegner, Teixeira & Verschoore, 2019).

What this suggests for CoC boards:

- The evidence does not favor one structure. What matters is whether members, especially providers, keep real influence after work is delegated to committees, a backbone or a government lead.
- Delegation to lead agencies and committees needs explicit, regular reporting to the board, or oversight of the delegated work can lapse.
- Committee demands can favor large, well-staffed organizations, so committee design shapes whose voice counts.

What would make CoC governance effective

The following is a synthesis of the CoC findings above and the nonprofit research in this brief.

- Real decision-making power for providers and people with lived experience.
- A shared, multi-year strategy that goes beyond the annual HUD funding application.
- Local government, health care and other mainstream systems brought into the governance structure.
- Broad representation of the network; unlike typical nonprofits, a larger CoC board may be an asset.
- Clear written delegation to the lead agencies, with regular reporting and monitoring by the board.
- Strict conflict-of-interest and recusal rules.
- System performance data used at the board level.
- The board practices the nonprofit research supports: role clarity, a strong chair and regular self-assessment.

CoC Structure, Funding and Performance

What HUD data show about funding growth, UFA status and Collaborative Applicant type

HUD data does not support that any specific CoC structure we could measure performs better. Funding growth, UFA designation and the type of Collaborative Applicant (government or nonprofit) each show weak, inconsistent or no links to system performance measures (SPMs) or Point-in-Time (PIT) counts.

Several apparent differences come out of small groups and many tests, and most do not survive adjustment for CoC size, category and data coverage. Read without significance tests (Section 3.5), the differences lean in different directions and no structure is ahead on every measure.

1. Summary of findings

Results with statistical significance tests.

- **Funding growth and performance (48 Major City CoCs).** Award growth from 2022 to 2024 mostly tracks national program growth (31.0% nationally; 34.2% Major City average). Links to outcomes are weak. Faster funding growth correlates with fewer new people entering homelessness (SPM 5, rho = -0.35) and with smaller PIT growth (rho = -0.29, which does not hold when New York City, Chicago and Denver are excluded). It is not related to days homeless, returns, exits to permanent housing or income.
- **Collaborative Applicant type shows no robust effect.** Among Major City CoCs, nonprofit-led CoCs grew faster (median 36.2% vs. 26.2%, p = 0.031, with the single-year edge in 2023-24) and had a better first-time-homelessness trend (-2.9% vs. +12.3%, p = 0.007). Their starting award levels did not differ significantly. The groups are small (21 vs. 23) and the pattern is not present across all CoCs once adjusted.
- **No UFA performance advantage.** The 18 UFAs receive somewhat more funding relative to need, but the gap is not significant and disappears after adjusting for size and category. No SPM is significantly better for UFAs, and their PIT counts grew faster (35% vs. 19%, p = 0.047; not significant once adjusted, p = 0.09).
- **Data coverage matters for comparison.** CoCs with higher HMIS participation show higher measured returns to homelessness (rho = +0.26) and slightly lower exits to permanent housing (rho = -0.16).
- **Housing market conditions relate to length of homelessness, not to other outcomes.** Across the 48 Major City CoCs, median days homeless is longer where rents are higher (rho = +0.65) and cheap rental units are scarcer (rho = -0.58). Exits to permanent housing, returns, SPMs improved and PIT change show no significant link to the market measures.

When removing the significance tests, leanings, not findings.

- **Funding growth (48 Major City CoCs).** Faster award growth goes with smaller PIT growth and fewer first-time homeless (rho = -0.29 and -0.35) but also with lower leaver income (rho = -0.21). All of these links are weak.
- **Collaborative Applicant type (Major City, 21 government-led vs. 23 nonprofit-led).** Nonprofit-led CoCs lead on award growth (10.0 points faster), first-time-homeless change (15.2 points better), average SPMs improved (2.43 vs. 1.71) and median award size. Government-led CoCs lead on PIT change (7.2 points lower, but about equal once New York City, Chicago and Denver are excluded), exits to permanent housing (5.2 points higher) and returns to homelessness (3.4 points lower). Across all classified CoCs the

performance measures lean the same way by smaller margins; government-led CoCs also lead on HMIS participation and hold larger awards (not adjusted for size).

- **UFAs (18 vs. 357).** UFAs have more funding relative to need (+29%) and per person counted (+35%), more permanent housing beds per person (+27%) and higher HMIS participation (+9.0 points), with a small edge on returns (2.5 points lower) and exits (1.3 points higher). They trail on average SPMs improved (1.94 vs. 2.25; the medians tie) and on PIT change (15.5 points higher).

2. Questions and approach

We tested whether CoC structure and funding are related to how a CoC performs, using public HUD data that cover all CoCs for 2022 to 2024. Performance is measured two ways: a count of SPMs that improved from 2022 to 2024 (of five), and the change in the PIT count. Section 3.5 reads the same comparisons without significance tests.

Question	Analysis	Data
1. Does funding growth track performance?	Spearman rank correlations, 48 Major City CoCs	HUD awards 2022-24, SPMs, PIT counts
2. Does Collaborative Applicant type matter?	Government vs. nonprofit recipient of the CoC planning grant	HUD FY2024 award list by project
3. Do UFAs outperform non-UFAs?	18 UFAs vs. 357 others; group tests and adjusted models; award relative to need tested against performance in 375 CoCs	FY2026 Estimated ARD Report; awards; SPMs; PIT, HIC
4. What is the impact of the HMIS coverage and CoC housing capacity?	HMIS participation and permanent housing capacity as controls and process measures	HIC counts by CoC, 2022-2024
5. Do housing market conditions explain outcomes?	Spearman rank correlations, 48 Major City CoCs matched to metropolitan areas	Harvard JCHS America's Rental Housing 2026; SPMs; PIT counts

SPMs counted: SPM 1 (median days homeless, lower is better), SPM 2 (returns within 24 months, lower), SPM 4 (leaver income, higher), SPM 5 (first-time homeless, lower), SPM 7 (exits to permanent housing, higher). SPMs improved is a simple tally of these five.

2.1 How to read the statistics

The results in this report come from the tools below. They show whether things are associated or whether two groups differ by more than chance would explain. None of them shows that one thing causes another.

Term or test	What it does	How to read it
Median	The middle value when CoCs are lined up from lowest to highest. Used instead of the average so a few very large CoCs, such as New York City, do not distort the result.	Half of the CoCs are above the median and half below.
n	The number of CoCs in a comparison.	Larger groups give more reliable results. With a small n, only large differences can be detected.
Spearman correlation (rho)	Checks whether two measures move together, using each CoC's rank rather than its exact value. It runs from -1 to +1.	Near 0 means no consistent relationship. Under 0.2 is very weak, 0.2 to 0.4 weak, 0.4 to 0.6 moderate and above 0.6 strong. The sign shows direction: on a "lower is better" measure such as PIT change, a negative rho means more funding growth goes with the better outcome.
Mann-Whitney test	Compares two groups, such as UFA vs. non-UFA or government-led vs. nonprofit-led, by asking whether values in one group tend to be higher than in the other. Reported as a p-value.	Not thrown off by extreme values. A low p-value means the groups differ by more than chance would normally produce. It does not say how large or how important the difference is.

Term or test	What it does	How to read it
Adjusted result (regression)	A regression (ordinary least squares, OLS) estimates the difference between two groups after accounting for other factors: CoC size (log of the PIT count; the 2022 count when the outcome is PIT change), CoC category and HMIS participation.	Asks whether a difference remains when the groups are made comparable. A difference that disappears after adjustment was probably due to those other factors.
p-value	The probability of seeing a difference or relationship at least this large by chance alone, if there were no real effect.	Below 0.05 is conventionally called statistically significant. Values between about 0.01 and 0.05 are called nominal in this report because many tests were run. A high p-value means no evidence of a difference, not proof that there is none.

rho = Spearman rank correlation; p = p-value; n = number of CoCs; OLS = ordinary least squares regression.

Two cautions apply throughout. When many tests are run, some will look significant by chance alone (about 1 in 20 at the 0.05 level), so isolated results near 0.05 are leads, not findings. Small groups, such as the 18 UFAs, also have little power to detect real differences, so "not significant" should be read as "no evidence found", not "no effect". Section 3.5 shows what the comparisons look like when significance is set aside; it describes leanings and does not change what counts as a finding.

3. Findings

3.1 Does funding growth track performance? (Major City CoCs)

Funding in the CoC Program is partly performance-based, so one might expect CoCs that perform well to gain funding. We tested this for the 48 Major City CoCs. HUD awards grew from $2.76 billion to $3.62 billion nationally (31.0%) between 2022 and 2024; the Major City average was 34.2% (median 31.9%).

Outcome (better if)	rho vs. award growth	p	Adjusted rho*	p
PIT change 2022-24 (lower)	-0.29	0.045	-0.19	0.22
SPM 1 median days (lower)	0.00	0.98	0.09	0.54
SPM 2 returns (lower)	0.06	0.70	0.01	0.95
SPM 5 first-time homeless (lower)	-0.35	0.015	-0.31	0.037
SPM 7 exits to permanent housing (higher)	0.18	0.23	0.19	0.20
SPM 4 leaver income (higher)	-0.21	0.15	-0.23	0.13
SPMs improved of 5 (higher)	0.19	0.20	0.20	0.20

**Adjusted excludes New York City, Chicago and Denver, whose 2024 PIT counts were affected by asylum-seeker sheltering (HUD 2024 AHAR; HUD press release pr24-327). Negative rho on a "lower is better" measure means faster funding growth correlates with the better outcome.*

- Two of seven outcomes are nominally significant, and the PIT result no longer holds when the three cities are excluded. With 14 tests run (7 outcomes by 2 funding measures), about one nominal result is expected by chance.
- Award per person counted (2024) is modestly related to SPMs improved (rho = +0.30, p = 0.038). SPMs come from HMIS data, so this link is not built into the calculation. **Caution:** the apparent link to lower PIT growth (rho = -0.35, p = 0.015; adjusted -0.27, p = 0.078) should be treated cautiously. The same 2024 PIT count is used in both measures, which creates an automatic relationship: a CoC whose count rose sharply has a

lower award per person and higher PIT growth even if funding has no effect. The award growth results in the table above are the cleaner test. Section 3.5 reads these links on size and direction alone.

- Funding growth reflects renewals, rent adjustments, as well as CoC scores. Because the competitive portion of the awards is not published, this is a weak proxy for performance.

3.2 Does the type of Collaborative Applicant matter?

There is no federal list of Collaborative Applicants. Only the Collaborative Applicant can be awarded CoC planning funds, so we identified it as the recipient of each CoC's planning project in the HUD FY2024 award list (357 of 375 CoCs identified). We classified each recipient as government or nonprofit from its organization name.

Major City CoCs. Of 48, 21 are government-led and 23 are nonprofit-led. Two joint power authorities (JPAs) (Los Angeles Homeless Services Authority and the King County Regional Homelessness Authority) and two CoCs with no planning grant in the award file (El Paso and Tampa) are excluded.

Measure	Government (n = 21)	Nonprofit (n = 23)	p
Award growth 2022-24	26.2%	36.2%	0.031
SPMs improved (of 5)	2	2	0.055
First-time homeless change 2022-24	+12.3%	-2.9%	0.007
PIT change 2022-24	+9.3%	+16.5%	0.91
PIT change, excl. NY, Chicago, Denver	+8.3%	+9.2%	0.72
Exits to permanent housing, 2024	33.8%	28.6%	0.72
Returns to homelessness, 2024	17.4%	20.8%	0.10
HMIS participation, 2024	87.5%	89.0%	0.78

Medians. Mann-Whitney p-values. Placing the two JPAs with government or with nonprofit changes the p-values only slightly (award growth 0.028-0.042; first-time homeless 0.005-0.014; SPMs improved 0.041-0.083, which crosses 0.05).

Funding level and change over time. We also compared award size and year-by-year funding change for Major City CoCs, using awards from 2018 to 2024. No significant difference in funding level was found, and the nonprofit growth edge comes from a single year, 2023 to 2024. Earlier years show no significant difference. Cumulative growth 2019-24 also differs (p = 0.032) because it includes that year.

Measure	Government (n = 21)	Nonprofit (n = 23)	p
Award 2022 (median)	$14.5M	$17.1M	0.69
Award 2024 (median)	$20.2M	$22.6M	0.83
Award per person counted, 2024	$5,657	$6,175	0.40
Growth 2018-19	4.3%	2.5%	0.29
Growth 2019-20	7.3%	6.5%	0.73
Growth 2020-21	4.2%	7.2%	0.65
Growth 2021-22	2.7%	2.1%	0.95
Growth 2022-23	11.6%	9.8%	0.71
Growth 2023-24	12.8%	17.4%	0.006
Cumulative growth 2019-22	18.4%	25.7%	0.49
Cumulative growth 2019-24	50.6%	72.5%	0.032

Medians; Mann-Whitney p-values. Award per person uses PIT counts, which in 2024 are inflated in New York, Chicago and Denver. In total dollars, Major City government-led CoCs grew 23.6% from 2022 to 2024 and nonprofit-led CoCs grew 35.3%.

The cumulative 2019-22 gap points the same direction as the later gain but is not significant, so the data do not show whether nonprofit-led CoCs have a lasting funding advantage or whether 2023-24 reflects one competition round. Across all classified CoCs, growth does not differ by type in any period except 2019-20 (5.4% vs. 4.6%, p = 0.032, not meaningful at this number of tests). Government-led CoCs hold larger awards (median $3.6M vs. $2.4M in 2022, p = 0.033), which is not adjusted for CoC size, and award per person does not differ (2024: $5,240 vs. $5,054, p = 0.54).

All classified CoCs. Across the 288 CoCs with a classified recipient (n varies by measure), award growth (25.3% vs. 26.9%) and SPMs improved (median 2 vs. 2) do not differ by type. Government-led CoCs show a worse first-time-homeless trend (+8.1% vs. -2.7%, p = 0.002), but this is not significant after adjusting for size, category and HMIS participation (p = 0.20). After adjustment, government-led CoCs show lower returns to homelessness (-2.3 percentage points, p = 0.005), which may partly reflect measurement.

The Major City differences rest on about 21 and 23 CoCs and roughly nine measures, so several nominal results are expected by chance. They are not replicated across the larger sample. Type is confounded with local context and is not randomly assigned. Section 3.5 shows the direction of each difference without significance tests.

3.3 Do UFAs outperform non-UFAs?

We compared the 18 CoCs with UFA designation against the other 357 CoCs.

Measure	UFA median	Non-UFA median	p
FY2024 award / PPRN	1.37x	1.06x	0.10
Award per person counted (2024 PIT)	$6,646	$4,936	0.11
Award growth 2022-24	28.9%	25.2%	0.41
SPMs improved 2022-24 (of 5)	2	2	0.22
Returns to homelessness, 2024	13.3%	15.8%	0.56
Exits to permanent housing, 2024	38.4%	37.1%	0.88
PIT change 2022-24	+34.8%	+19.3%	0.047

Mann-Whitney tests. Award growth excludes five non-UFA CoCs with no 2022 award.

- UFAs show higher award relative to need (PPRN, preliminary prorata need - a formula estimate of need) and per person counted, but neither gap is significant, and the award-to-need gap disappears after adjusting for size and category (p = 0.61).
- No SPM is significantly better for UFAs. After adjustment, the UFA effect on SPMs improved is -0.30 (p = 0.25). The one significant difference, faster PIT growth for UFAs, is not significant once adjusted for size (+18.9 percentage points, p = 0.09). The PIT model uses the 2022 count for size because the 2024 count is part of the outcome.
- Within the UFAs, a higher award-to-need ratio goes with more SPMs improved (rho = +0.50, p = 0.035, n = 18). This is one of about eight tests on a small group, it is absent for non-UFAs (rho = -0.05) and does not appear for PIT change, so it should not be relied on.
- Only 18 UFAs are in the sample (two are Major City CoCs), so the test has low power. No evidence of an advantage is not proof that none exists. Section 3.5 shows where UFAs lean without significance tests.

Award relative to need is not a performance signal. Award divided by PPRN mostly reflects how large a CoC's existing renewal grants are compared with that formula: across 375 CoCs it is almost identical to renewal demand divided by PPRN (rho = 0.99). It shows no relationship with performance, so a high ratio should be read as a measure of funding position, not as evidence of better results.

Test (375 CoCs unless noted)	Result
Award / PPRN vs. renewal demand / PPRN	rho = 0.99: the ratio mostly reflects renewal base relative to the formula
Award / PPRN vs. SPMs improved	rho = -0.04, p = 0.43 (no relationship)
Award / PPRN vs. PIT change 2022-24	rho = -0.09, p = 0.07 (no relationship)
Award / PPRN vs. first-time homeless change (SPM 5)	rho = +0.14, p = 0.01 (higher ratio goes with a worse trend)
Same, 48 Major City CoCs: SPMs improved	rho = -0.06, p = 0.69 (no relationship)

Award relative to PPRN uses FY2024 awards and FY2026 PPRN (Preliminary Pro Rata Need) from the FY2026 Estimated ARD Report. Renewal demand is the Annual Renewal Demand (ARD) in the same report.

3.4 What is the impact of the HMIS coverage and CoC housing capacity?

The Housing Inventory Count (HIC) reports how many beds each CoC has and how many of its emergency shelter, transitional housing and safe haven beds report into HMIS. We used two HIC measures: HMIS participation, and permanent housing capacity (permanent supportive housing and rapid re-housing beds per person counted). We asked whether either helps explain differences in performance, and whether UFAs differ on them.

- **HMIS participation and returns.** Higher HMIS coverage goes with a higher measured return-to-homelessness rate (rho = +0.26, $p < 0.001$, n = 375; Major City +0.28, p = 0.05). A likely explanation is that CoCs capturing more of their system detect more returns. Higher HMIS participation also goes with slightly lower exits to permanent housing across all CoCs (rho = -0.16, p = 0.002; Major City -0.14, p = 0.35).
- **Permanent housing capacity.** Permanent supportive and rapid re-housing beds per person counted go with higher exits to permanent housing across 374 CoCs (rho = +0.14, p = 0.007) but not among the Major City CoCs (rho = +0.03, p = 0.84, n = 47).
- **UFA status.** UFAs do not differ significantly in HMIS participation (86% vs. 77%, p = 0.47). They have somewhat more permanent housing beds per person counted (0.97 vs. 0.76, p = 0.059). Section 3.5 reads these links without significance tests.

3.5 What the results show without significance tests

Sections 3.1 to 3.4 treat a difference as a finding only when it is statistically significant. This section reads the same comparisons on the size and direction of the observed differences alone. It shows where the data lean, not what they prove. With the smaller groups (18 to 23 CoCs), gaps of this size often arise by chance. In the tables, "leans toward" names the group that is ahead on that measure (lower is better for returns, PIT change and first-time-homeless change); two groups are called "about equal" when they differ by less than one percentage point.

Funding growth and outcomes (48 Major City CoCs). Faster award growth goes with smaller PIT growth and fewer first-time homeless (rho = -0.29 and -0.35, weak), but also with slightly lower leaver income (-0.21, weak) and only a very weak gain in exits and SPMs improved. There is no link with days homeless or returns. The directions are mixed, so faster funding growth does not consistently go with better results.

Outcome	rho: award growth	Size	Direction	rho: award per person
PIT change 2022-24 (lower is better)	-0.29	weak	Faster growth goes with the better result	-0.35
SPM 5 first-time homeless (lower)	-0.35	weak	Faster growth goes with the better result	-0.25
SPM 1 median days (lower)	0.00	very weak	No consistent link	-0.16
SPM 2 returns (lower)	+0.06	very weak	No consistent link	+0.01
SPM 7 exits to permanent housing (higher)	+0.18	very weak	Faster growth goes with the better result	+0.03
SPM 4 leaver income (higher)	-0.21	weak	Faster growth goes with the worse result	+0.01
SPMs improved of 5 (higher)	+0.19	very weak	Faster growth goes with the better result	+0.30

Spearman rho; size labels: under 0.2 very weak, 0.2 to 0.4 weak, 0.4 to 0.6 moderate. Award per person shares the 2024 PIT count with PIT change, so that link is partly built in.

UFAs vs. non-UFAs (18 vs. 357). UFAs have more funding relative to need (award / PPRN, +29%) and per person (+35%), more permanent housing capacity and higher HMIS participation. They are slightly ahead on returns and exits. They are behind on SPMs improved (average 1.94 vs. 2.25; the medians tie) and on PIT change, which grew faster. Within the UFAs, award relative to need goes with more SPMs improved (rho = +0.50), while among the other CoCs there is none (-0.05). Overall: more resources and capacity, a small edge on two SPMs, and no edge on the combined tally or PIT.

Measure (medians unless noted)	UFA	Non-UFA	Difference	Leans toward
Award relative to need (award / PPRN)	1.37x	1.06x	+29%	UFA (higher)
Award per person counted, 2024	$6,646	$4,936	+35%	UFA (higher)
Award growth 2022-24	28.9%	25.2%	+3.7 pts	UFA (faster)
Returns to homelessness, 2024 (lower is better)	13.3%	15.8%	-2.5 pts	UFA
Exits to permanent housing, 2024	38.4%	37.1%	+1.3 pts	UFA
SPMs improved (of 5), median	2	2	0	Tie
SPMs improved (of 5), average	1.94	2.25	-0.30	Non-UFA
PIT change 2022-24 (lower is better)	+34.8%	+19.3%	+15.5 pts	Non-UFA
HMIS participation, 2024	86.1%	77.1%	+9.0 pts	UFA (higher)
PSH + RRH beds per person counted	0.97	0.76	+27%	UFA (more)
Growth in PSH + RRH beds, 2022-24	+7.5%	-0.9%	+8.4 pts	UFA (faster)

Difference = UFA minus non-UFA (percent for ratios and dollar amounts, percentage points for rates). Medians from the UFA Analysis and HIC Checks tabs; SPMs improved average computed from the same data. PSH + RRH = permanent supportive housing plus rapid re-housing beds.

Collaborative Applicant type, Major City CoCs (21 government-led vs. 23 nonprofit-led). Neither type is ahead on every measure. Nonprofit-led CoCs lead on award growth, first-time-homeless change and SPMs improved (average) and have larger median awards. Government-led CoCs lead on PIT change (although not once New York, Chicago and Denver are excluded), exits and returns. Nonprofit-led CoCs are ahead on cumulative growth in both windows (2019-22 and 2019-24), and their lead in 2023-24 is the largest single-year gap; earlier single years go both ways.

Measure (medians unless noted)	Government-led	Nonprofit-led	Difference	Leans toward
Award growth 2022-24	26.2%	36.2%	-10.0 pts	Nonprofit (faster)
First-time homeless change 2022-24 (lower is better)	+12.3%	-2.9%	+15.2 pts	Nonprofit
SPMs improved (of 5), median	2	2	0	Tie
SPMs improved (of 5), average	1.71	2.43	-0.72	Nonprofit
PIT change 2022-24 (lower is better)	+9.3%	+16.5%	-7.2 pts	Government
PIT change, excluding NY, Chicago, Denver	+8.3%	+9.2%	-0.9 pts	About equal
Exits to permanent housing, 2024	33.8%	28.6%	+5.2 pts	Government
Returns to homelessness, 2024 (lower is better)	17.4%	20.8%	-3.4 pts	Government
HMIS participation, 2024	87.5%	89.0%	-1.5 pts	Nonprofit (slightly)
Award, 2022 (median)	$14.5M	$17.1M	-15%	Nonprofit (larger)
Award, 2024 (median)	$20.2M	$22.6M	-11%	Nonprofit (larger)
Award per person counted, 2024	$5,657	$6,175	-8%	Nonprofit (higher)
Growth 2023-24	12.8%	17.4%	-4.6 pts	Nonprofit
Growth 2022-23	11.6%	9.8%	+1.8 pts	Government (slightly)
Cumulative growth 2019-22	18.4%	25.7%	-7.3 pts	Nonprofit
Cumulative growth 2019-24	50.6%	72.5%	-21.8 pts	Nonprofit

Difference = government-led minus nonprofit-led (percent for dollar amounts, percentage points for rates). Medians; two public authorities and two CoCs with no planning grant excluded. SPMs improved average computed from the CA Data tab.

All classified CoCs (164 government-led vs. 124 nonprofit-led). On the performance measures the picture leans the same way as in the Major City group, by smaller margins: government-led CoCs are ahead on PIT change, exits and returns, and nonprofit-led CoCs on first-time-homeless change and, slightly, on award growth and SPMs improved. Unlike the Major City group, government-led CoCs also lead on HMIS participation and hold larger awards (not adjusted for CoC size).

Measure (medians unless noted)	Government-led	Nonprofit-led	Difference	Leans toward
Award growth 2022-24	25.3%	26.9%	-1.6 pts	Nonprofit (slightly)
First-time homeless change (lower is better)	+8.1%	-2.7%	+10.7 pts	Nonprofit
SPMs improved (of 5), average	2.13	2.31	-0.18	Nonprofit (slightly)
PIT change 2022-24 (lower is better)	+18.0%	+22.6%	-4.7 pts	Government
Exits to permanent housing, 2024	38.4%	33.6%	+4.8 pts	Government
Returns to homelessness, 2024 (lower is better)	15.5%	17.1%	-1.6 pts	Government (slightly)
HMIS participation, 2024	80.6%	74.1%	+6.5 pts	Government
Award, 2022 (median)	$3.6M	$2.4M	+50%	Government (larger)
Award per person counted, 2024	$5,240	$5,054	+4%	Government (slightly)

Difference = government-led minus nonprofit-led. Medians. Government-led CoCs hold larger awards, which is not adjusted for CoC size.

HMIS coverage and housing capacity. The observed links are small. Higher HMIS participation goes with higher measured returns (rho = +0.26) and slightly lower exits (-0.16). More permanent housing beds per person go with slightly higher exits (+0.14). More permanent housing beds per person also go with smaller PIT growth (-0.16), but that link is partly built in because the 2024 PIT count is in both measures. Changes in HMIS participation and bed growth show almost no link to outcomes across all CoCs. These leads do not change the reading in Section 3.4.

What changes and what does not

- **Collaborative Applicant type.** Leads in both directions: nonprofit-led CoCs on funding growth, funding level and first-time homelessness; government-led CoCs on PIT change, exits and returns.
- **UFAs.** A mixed picture: more funding and capacity and a small edge on returns and exits, but fewer SPMs improved on average and faster PIT growth.
- **What does not change.** No structure is ahead on every measure, funding growth remains a weak signal of performance, and award relative to need still mostly reflects the renewal base.

3.6 Do housing market conditions explain outcomes?

Sections 3.1 to 3.5 ask about structure and funding. This section asks whether the rental market a CoC operates in is related to how it performs. We matched each of the 48 Major City CoCs to the metropolitan area that contains it (Appendix A7) and used the Harvard Joint Center for Housing Studies (JCHS) tabulations of 2024 American Community Survey data, America's Rental Housing 2026. Six market measures were tested against six outcomes, 36 Spearman rank correlations in all. Market conditions are levels, so the outcomes are levels too: median days homeless in 2024 (SPM 1); exits to permanent housing from shelter, transitional housing and rapid re-housing (SPM 7b.1); successful retention in or exit from permanent housing (SPM 7b.2); and returns to homelessness (SPM 2), each of the last three averaged over 2022-24. SPMs improved and PIT change are the measures used elsewhere in this report.

Market measure (2024)	Days homeless	Exits to PH	PH retention	Returns	SPMs improved	PIT change
Median gross rent	**+0.65** **p < 0.001**	+0.16 p = 0.293	**+0.35** **p = 0.014**	-0.14 p = 0.340	-0.15 p = 0.317	-0.06 p = 0.672
Share of rental units under $1,000	**-0.56** **p < 0.001**	-0.16 p = 0.292	-0.27 p = 0.068	+0.05 p = 0.717	+0.16 p = 0.280	+0.07 p = 0.634
Units under $1,000 per renter household under $30,000	**-0.58** **p < 0.001**	-0.19 p = 0.197	-0.27 p = 0.062	+0.07 p = 0.645	+0.22 p = 0.133	+0.03 p = 0.825
Renters severely cost-burdened (all incomes)	+0.21 p = 0.144	+0.23 p = 0.109	+0.03 p = 0.859	-0.09 p = 0.538	-0.24 p = 0.098	+0.03 p = 0.858
Renters under $15,000 severely cost-burdened	-0.28 p = 0.057	-0.06 p = 0.706	**-0.37** **p = 0.010**	+0.11 p = 0.456	-0.22 p = 0.128	-0.17 p = 0.258
Rental vacancy rate	**-0.33** **p = 0.022**	+0.20 p = 0.178	-0.24 p = 0.103	+0.04 p = 0.769	-0.22 p = 0.127	-0.10 p = 0.491

Spearman rho, with the p-value below it; n = 48 Major City CoCs. Bold: p < 0.05. Rent bands are inflation-adjusted contract rents.

- **Length of homelessness tracks the market.** Median days homeless is longer where rents are higher (rho = +0.65), where fewer rental units rent for under $1,000 (-0.56) and where there are fewer such units per low-income renter household (-0.58). It is also longer where vacancy is lower (-0.33). These four results hold without New York City, Chicago and Denver (rho = +0.66, -0.61, -0.62 and -0.29).
- **No link to exits, returns, SPMs improved or PIT change.** None of the 24 tests of these four outcomes reaches p < 0.05. A cheaper rental market does not related with more exits to permanent housing or fewer returns to homelessness.
- **Retention is unconfirmed.** Retention in or exit from permanent housing relates with higher rents (rho = +0.35, p = 0.014), the opposite of what an affordability explanation predicts, and with lower severe burden among renters under $15,000 (rho = -0.37, p = 0.010). These are two of 36 tests, so they should not be relied on.

- **Chance accounts for part of the picture.** Six of the 36 tests reach $p < 0.05$ where about two would by chance. Four of the six are the days-homeless results, the only consistent pattern.
- **Cleveland and Detroit.** Cleveland (OH-502) is a Part 3 improver but not a Major City CoC, so it is not included in the table above. Its metropolitan area has some of the lowest rents among the large CoCs: median gross rent of $1,070 against a Major City median of $1,626, 58% of rental units under $1,000 (median 19%) and 1.64 such units per renter household under $30,000 (median 0.85). Its outcomes sit near the middle: exits averaged 34% over 2022-24 (Major City median 32%), median days homeless were 62 (median 60.5) and returns averaged 21.8% (median 18.6%). Among renters under $15,000, 72% are severely burdened, below the 81% median but still high. Detroit has the highest exit rate of the 49 CoCs (58%) in a market that is also low-rent ($1,233, seventh lowest of 48), yet its median days homeless, 103, are among the longest (10th of 49).

In short, a cheaper rental market relates with shorter stays across large CoCs, but it does not by itself produce more exits or fewer returns, and the two low-rent CoCs among the improvers differ on both. Market conditions are context for reading CoC performance, not an explanation of it.

4. What this means for CoC governance work

- **Structure alone is not a performance lever.** Neither UFA designation nor the type of lead agency shows a robust outcome advantage. This is consistent with the board governance research in Part 1 of this document, which found no single governance model shown to produce better results and emphasized how a board works over how it is set up. Read without significance tests (Section 3.5), the leanings point in both directions, so no structure comes out ahead on every measure.
- **Data governance deserves attention.** HMIS participation changes how SPMs read, which makes HMIS coverage a governance-relevant issue.
- **Judge governance on process and fit.** Housing market conditions go with how long people stay homeless, but not with exits, returns or SPMs improved in the Major City CoCs tested (Section 3.6). A governance review should be framed around decision-making, delegation, monitoring and data quality.

5. Limitations

- Associations only. SPMs are self-reported from HMIS and data quality varies; PIT counts are one-night estimates whose methods vary by community and year.
- Small groups: 18 UFAs and about 21 to 23 CoCs per type in the Major City group. Several tests were run in each analysis, so some nominal results (p about 0.01 to 0.05) are expected by chance.
- Section 3.5 reports observed differences without significance tests. With groups of 18 to 23 CoCs such differences often arise by chance, so it describes leanings and should not be read as findings.
- Award growth is total award, not the competitive portion which HUD does not publish. FY2025 awards equal FY2024 because there was no FY2025 competition, so outcome analysis covers 2022 to 2024 and award history covers 2018 to 2024.
- Collaborative Applicant type was classified from the recipient's organization name. Eighteen CoCs have no identified recipient.
- Collaborative Applicant type reflects the FY2024 planning-grant recipient and is applied to earlier years; a CoC that changed lead agency before 2024 is misclassified for those years. Pre-2022 years were used only for award history, not for SPMs or PIT counts, whose 2020 and 2021 values are affected by the pandemic.

- The housing market analysis (Section 3.6) matches each CoC to the larger metropolitan area that contains it, covers only the 48 Major City CoCs, relates 2024 market conditions to 2022-24 outcomes and runs 36 tests, so some nominal results are expected by chance.

CoCs That Improved Year over Year

Governance, HMIS coverage and award history of Detroit, Cleveland/Cuyahoga County and Georgia Balance of State

Of the 73 CoCs analyzed, three improved on their own prior year in at least 4 of 6 intervals on at least 3 of 5 measures: Detroit, Cleveland/Cuyahoga and Georgia Balance of State. They share no board design, and no document reviewed attributes their results to a specific cause.

Detroit and Cleveland see nearly their whole system in HMIS; Georgia sees only part of it. Award history does not show funding rising with improvement: Detroit, the firmest case, grew 49% from 2018 to 2024 against 67% nationally.

1. Why these three

Using HUD System Performance Measures, each CoC was compared with its own prior year's performance, 2018 through 2024 (six year-to-year intervals, five measures). A CoC was counted as a consistent improver if it improved in at least 4 of 6 intervals on at least 3 of the 5 measures. Of the 73 CoCs analyzed that were either in the Major City cohort or a $20M+ annual award cohort[1], three meet that bar. Large CoCs were analyzed separately because they face different conditions than small ones. Homelessness is concentrated in them: the 48 Major City CoCs account for 54% of people counted nationally (HUD 2024 AHAR), and they sit in metropolitan markets with higher rents than non-metro areas (Harvard JCHS, 2024), which research links to higher homelessness (Glynn & Fox; Pew). The table below shows intervals improved out of 6 for each measure.

CoC	HUD category	2024 award	PIT 2024	Days	Returns	Income	First-time	Exits
Detroit (MI-501)	Major City	$40.2M	1,725	2	4	4	4	4
Cleveland/Cuyahoga (OH-502)	Largely Suburban	$53.2M	1,637	2	5	4	4	5
Georgia Balance of State (GA-501)	Largely Suburban	$38.3M	6,633	2	4	5	4	2

Source: HUD System Performance Measures, 2018-2024; HUD CoC award and PIT data.

2. What the governing documents say

The table below restates what each CoC's governing document says. It describes the structure on paper; it does not show how the structure operates in practice.

	Detroit (MI-501)	Cleveland/Cuyahoga (OH-502)	Georgia Balance of State (GA-501)
Governing body	CoC Board acts on behalf of the CoC; General Membership designates the Lead Agency, Collaborative Applicant, HMIS Lead and Coordinated Entry Lead.	OHS Advisory Board "serves as the governing body" of the CoC. Created by a 1992 City of Cleveland / County Commissioners agreement (ORC 307.15).	21-member Board; full membership ratifies the charter, elects at-large seats and reviews board selection every five years.

[1] The analysis is limited to the 48 Major City CoCs and the 52 CoCs with FY2024 awards of $20M or more; 27 are in both, leaving 73. These CoCs represent 19% of all CoCs but held 65% of the people counted in the 2024 Point-in-Time count (median count 2,758 versus 576 for other CoCs) and received 67% of 2024 awards. Their performance measures also vary less from year to year (a typical change of 14% versus 21%), so a sustained run of improvement is less likely to reflect chance.

	Detroit (MI-501)	Cleveland/Cuyahoga (OH-502)	Georgia Balance of State (GA-501)
Board size and seats	19 to 25 members, at least 50% elected. Elected 10-16 (4-7 providers, 2-3 homeless or formerly homeless, 4-6 at-large). Appointed 9-15 (City of Detroit, City Council, Hamtramck, Highland Park, VA, up to 5 open seats, and the lead-entity directors).	Up to 32. Designated seats (20, in 13 categories: county, city, housing authority, VA, ADAMHS, schools, NEOCH, re-entry, Youth Action Board, six provider seats chosen by HSPA); 3 standing seats plus up to 4 community representatives; 5 at-large.	13 state-level seats (state agencies for ESG, mental health, family violence, corrections, schools, workforce, veterans housing, child welfare, public health; State Housing Trust Fund Commission; one lived-experience seat), 3 county seats (Clayton, Gwinnett, Macon-Bibb) and 5 elected, one per DCA Super Region.
How seats are filled	Annual elections for elected seats; homeless/formerly homeless seats elected by the Detroit Advisors Group. Appointed entities name designees and renew by vote of confidence every 3 years.	Designating bodies recommend; other seats through a September call for nominations, Governance Committee scoring, and a November Board vote.	Agency heads appoint, subject to Membership and Rules Committee approval; five seats elected by membership.
Terms	Elected: 3 years, 6-year consecutive cap, staggered thirds.	3 years, staggered, no limit on consecutive terms. Co-chairs 2 years (three co-chairs, one from a non-CoC-funded organization).	3 years, staggered, "no limit on terms of service."
Lived experience	2-3 elected board seats (compensated); PWLEH Leadership Council (Detroit Advisors Group, Youth Action Council, Ambassador Program).	Up to 4 community representative seats (current or formerly homeless, at least one youth 18-24); self-governing Youth Action Board.	1 appointed seat for a homeless or formerly homeless person.
Lead roles	Collaborative Applicant (HUD FY2024 planning recipient): Homeless Action Network of Detroit, a nonprofit. Designations run up to 3 years; termination for cause needs a 75% membership vote.	Collaborative Applicant and HMIS Lead: Cuyahoga County OHS (county government). Coordinated Entry Lead: Frontline Services.	Collaborative Applicant: Georgia DCA (state government). HMIS Lead: Georgia Housing and Finance Authority. Coordinated Entry Lead: not stated.
Funding and performance bodies	CoC Funding and Performance Committee; Board "takes action against poor performers"; CoC Lead monitors and measures system performance. Also CAM Governance, Permanent Housing, Reimagining Shelter, Unsheltered, Youth, Veteran and Racial and Social Equity committees.	NOFO Review (conflict-free; approves renewal criteria, reviews scores), NOFO Strategy, Program Policy (standards for ES, PSH, RRH and CES, reviews outcomes), Governance and Executive committees.	Standards, Rating and Project Selection (scoring, monitoring, poor-performance policy, outcomes); HMIS; Membership and Rules; Assessment, Placement and Services.
Conflict of interest	Annual written disclosure; recusal from related votes and discussion.	Annual attestation or disclosure; recusal; no ranking of own or family-linked funding.	Policy and code of conduct kept by Membership and Rules Committee; direct conflicts barred from Standards Committee.
Charter review	At least annually; amendments need a two-thirds vote.	Charter reviewed annually; Bylaws at least every 5 years (adopted 5/16/2022, revised 7/26/2023 and 3/20/2025).	At least annually by Membership and Rules; ratified 11/17/2023; current version approved 8/27/2025.

Sources: Detroit CoC Governance Charter (working draft); Cleveland/Cuyahoga OHS Advisory Board Bylaws and Appendix I Charter; Georgia BoS CoC Governance Charter approved 8/27/2025 (DCA); HUD FY2024 CoC planning project awards.

3. What stands out

- **The three do not share a board design.** Detroit has at least half its seats elected, with a six-year cap, Georgia is mostly appointed by agency heads with no term limit, and Cleveland mixes designated, nominated and at-large seats with no term limit. Improvement shows up under all three.

- **Several features do recur.** Each has lived-experience seats on the board, a committee dedicated to funding or performance review, written conflict-of-interest and recusal rules, and an annual charter review.
- **Lead roles differ.** Two of the three have a government Collaborative Applicant (Cleveland and Georgia) and one a nonprofit (Detroit). None has a HUD-designated Unified Funding Agency.
- **Detroit is the only one of the three that states lived-experience members are paid.** Its charter has the Detroit Advisors Group elect the lived-experience board seats, says those members will be compensated, and places three lived-experience bodies in a leadership council.

4. How much of each system do the SPMs see? HMIS coverage

System Performance Measures come from HMIS, so they describe only the beds and projects that participate in it. HUD's Housing Inventory Count (HIC) reports the share of beds in HMIS. The table shows the rate excluding domestic violence (DV) beds, which are kept in a separate comparable database and cannot be in HMIS.

CoC	ES/TH/SH excl. DV, 2024 | 2025	PSH excl. DV, 2024 | 2025	All types excl. DV, 2018	All types excl. DV, 2024	All types excl. DV, 2025
Detroit (MI-501)	100% | 100%	87.5% | 83.2%	90.3%	92.4%	90.2%
Cleveland/Cuyahoga (OH-502)	100% | 100%	88.9% | 87.0%	88.5%	93.2%	91.8%
Georgia Balance of State (GA-501)	66.7% | 61.2%	73.9% | 77.6%	86.4%	75.0%	60.9%

Source: HUD Housing Inventory Count by CoC, 2018-2025. Across the 385 CoCs, the median is 93.5% for ES/TH/SH and 87.4% for all project types, both excluding DV beds.

- **Detroit and Cleveland see nearly the whole system.** Detroit's non-DV emergency shelter, transitional housing and rapid re-housing beds were 100% in HMIS in every year from 2018 to 2025, and PSH was 81-88%. Cleveland's shelter coverage rose from 81% in 2018 to 87% in 2023 and was 100% in 2024 and 2025.
- **Cleveland's coverage moved during the period.** PSH coverage dropped to 74% in 2022 and 2023 before returning to 89% in 2024. Exits to permanent housing fell from 51.1% to 29.8% in 2022 and recovered to 39.5% by 2024, years that coincide with the PSH coverage dip and recovery. These data cannot separate a coverage effect from a real change.
- **Georgia has a partial view.** On the HIC basis, 1,400 of 2,100 non-DV ES/TH/SH beds were in HMIS in 2024 (66.7%), including 82% of emergency shelter and 42% of transitional housing beds. PSH coverage fell from 97% in 2018 to 74% in 2024. Across all project types, coverage fell from 86% to 75%, and to 61% in the 2025 count. Shelter and transitional housing combined fell from 67% to 61% between 2024 and 2025, and rapid re-housing from 99% to 85%.
- **DV beds explain part of Georgia's low rate.** DV beds are 1,284 of Georgia's 3,384 ES/TH/SH beds (38%), compared with 81 of 1,244 in Detroit (7%) and 44 of 1,585 in Cleveland (3%). Even without them, about a third of Georgia's non-DV shelter beds are outside HMIS.

Coverage as reported in the FY2026 Consolidated applications

Each application reports HUD's bed coverage rate from the FY2026 HDX Competition Report that reports on the HIC conducted in January/February of 2026. HUD sets 85% as the threshold for full credit.

CoC	Emergency shelter	Transitional housing	Rapid re-housing	PSH
Detroit (MI-501)	100%	100%	100%	89.5%
Cleveland/Cuyahoga (OH-502)	100%	100%	100%	87.4%
Georgia Balance of State (GA-501)	77.8%	62.1%	92.2%	76.1%

Source: FY2026 CoC Consolidated Applications, item 2A-9.

- **Georgia describes steps to raise coverage.** They include an expanded coordinated entry team, dedicated HMIS staff with weekly office hours from 2026, a performance monitoring team starting in October 2026, and a partnership with the Criminal Justice Coordinating Council to encourage VSP use of comparable databases (item 2A-9a).

5. What is behind the results? What the documents say, and what they do not

No document reviewed attributes these results to a specific cause. This section sets out what each CoC's own documents say about strategy and what the year-by-year data show.

Detroit (MI-501)

- **In the data:** Much of the results come from 2024. Returns fell 4.0 points (20.1% to 16.1%), exits to permanent housing rose 7.8 points (55.1% to 62.8%), first-time homelessness fell by 171 and income rose 2.0 points. Days homeless rose 24 days in the same year, to 103, up from 61 in 2018.
- **FY2024 Consolidated Application:** The application describes a Coordinated Access Model covering the full CoC through a hybrid call center and multisite access points, referrals to vacancies within 2 days, and a Housing First evaluation that tracks time from referral to move-in and returns within 6 months of a permanent housing exit (items 1D-2a and 1D-8, pp. 24 and 29-31).
- **FY2026 Consolidated Application:** The CoC reports a significant increase in first-time homelessness for 10/1/2024-9/30/2025, attributed in part to two Drop-In Centers opening in late 2024 as short-term emergency shelter for hospitals and law enforcement (item 2A-5). It describes deeper assessment at the call line to divert people from shelter, an Adult Protective Services partnership, and the City's Right to Counsel eviction ordinance. From October 2025 to June 2026, 5% of households calling coordinated entry (935) were diverted. For length of time homeless, it says front-door diversion "contributed to a decrease" and lists rapid re-housing deposits, housing navigation for PSH referrals, biweekly case consults, quarterly length-of-time data to the PSH and RRH workgroups, Detroit Housing Commission project-based vouchers, and 286 new permanent housing units in 2027-2028, mostly not CoC-funded (item 2A-6).

Cleveland/Cuyahoga (OH-502)

- **In the data:** Returns fell from 28.4% to 19.5%, improving in 5 of 6 intervals. Exits improved in 5 of 6 intervals, but the one decline (2021-22, down 21.3 points) offset earlier gains, and exits were 39.5% in 2024 against 38.9% in 2018. Income improved in 4 of 6 intervals but fell 18.3 points in 2019-20; it was 23.3% in 2024 against 39.7% in 2018.
- **In the documents:** The 2023-2027 Strategic Action Plan (January 2023) says Cleveland had "at best a very limited decrease" in homelessness, sets a 25% reduction target for 2027, and targets 830 more rapid re-housing and 340 more PSH slots a year (pp. 2, 16-17). It credits pandemic-era non-congregate shelter and extended rapid re-housing stays with offsetting an expected increase (p. 4).

- **FY2024 Consolidated Application:** Rapid re-housing beds rose from 1,004 in 2023 to 1,281 in 2024 (p. 26). The housing authority reports that 41% of FY2023 new admissions were homeless at entry, and 100% for EDEN (p. 20). The coordinated entry redesign was completed in 2024 with implementation in January 2025, and the City's A Home for Every Neighbor program began in August 2024.
- **FY2026 Consolidated Application:** The CoC reports that first-time homelessness rose in 2025 compared with 2024 and that length of time homeless rose slightly, from 126 to 129. It sets a goal of 60-90 days and describes committee work on shelter stay limits and specialized shelters that move people out within 30 days. It chose to keep a 12-month rapid re-housing subsidy. It dedicates 10% of monthly subsidies to bridge unsheltered people into PSH, and A Home For Every Neighbor operates as a rapid re-housing project that reduced encampments (items 2A-4, 2A-5, 2A-6).

Georgia Balance of State (GA-501)

- **In the data:** The gains are mostly small. Income improved in 5 of 6 intervals, by 0.8 to 3.1 points each. Three of the four returns improvements were under half a point (0.1 to 0.4). Both exits improvements were 1.5 points or less, after exits fell from 63.0% in 2018 to 37.1% in 2022.
- **FY2024 Consolidated Application:** The FY2024 renewal scoring awards points for returns to homelessness (15 points, target 15% or less), earned income increases (10 points, 8% or more), income from all sources (10 points, 54% or more), housing stability (20 points, 85% or more) and HMIS data quality and timeliness. These incentives are consistent with improvement on income and returns. Coordinated entry has access points in all seven regions plus a toll-free line, and a Housing First orientation.
- **FY2026 Consolidated Application:** To reduce first-time homelessness, the CoC cites a diversion and prevention screening tool in coordinated entry that is integrated with HMIS, coordination with the statewide ESG program, and State Housing Trust Fund and HOME-ARP funds used to extend coordinated entry to at-risk households (item 2A-5). For length of time, it cites coordinated entry prioritization, rapid re-housing, an expanded coordinated entry team, HOME-ARP work toward 250 new permanent housing units over five years, and 146 units in the pipeline from a tax credit partnership (item 2A-6).

6. Do awards follow performance?

Part 2 tested funding growth against performance across Major City CoCs and found weak, inconsistent links. This section follows the three improvers' total HUD awards over the same period as the performance intervals, 2018 to 2024.

CoC	Award, 2018	Award, 2024	Growth, 2018-24	Growth, 2018-23	Intervals above national growth (of 6)
Detroit (MI-501)	$26.9M	$40.2M	+49.3%	+30.0%	1
Cleveland/Cuyahoga (OH-502)	$28.2M	$53.2M	+88.8%	+50.1%	4
Georgia Balance of State (GA-501)	$19.2M	$38.3M	+98.8%	+25.4%	1
All CoCs, national total	$2,164M	$3,616M	+67.1%	+45.1%	n/a

Source: HUD System Performance Measures, CoC award amounts by year (386 to 394 CoCs per year); the national total sums the CoCs reporting each year.

Award change by interval	2018-19	2019-20	2020-21	2021-22	2022-23	2023-24
Detroit (MI-501)	+1.3%	+6.0%	+5.8%	+4.7%	+9.3%	+14.8%
Cleveland/Cuyahoga (OH-502)	+5.6%	+7.6%	+2.6%	+10.4%	+16.7%	+25.7%
Georgia Balance of State (GA-501)	-1.8%	+6.7%	+6.0%	+0.1%	+12.7%	+58.6%
National total	+5.5%	+8.2%	+7.1%	+4.3%	+13.7%	+15.2%

Source: HUD System Performance Measures. Interval figures are year-over-year changes; an interval is above national growth when the CoC's change exceeds the national change.

- **Detroit, the firmest case, lagged national funding growth.** Its award grew 49.3% from 2018 to 2024 against 67.1% nationally, ranking 32nd of 48 Major City CoCs (median growth in that group, 66.6%). It grew faster than the national total in only one interval, 2021-22. Its largest performance gains came in 2024, when its award rose 14.8%, just under the 15.2% national rise.
- **Cleveland grew faster than the national total in four of six intervals.** Its award rose 88.8%, ranking 21st of 52 among CoCs with $20M or more in 2024 awards (median growth, 82.2%). Its largest increase, 25.7%, came in 2023-24.
- **Georgia's growth comes from one year.** Its award rose 58.6% in 2023-24, from $24.1M to $38.3M, most of its 98.8% growth since 2018; through 2023 it had grown 25.4% against 45.1% nationally. Georgia ranks 18th of 52 in the $20M+ group.
- **Across the 73 CoCs, improving did not go with funding growth.** For 72 CoCs with award data, the number of measures improved in at least 4 of 6 intervals has no relationship with award growth from 2018 to 2024 (Spearman rho = -0.01, p = 0.92). The result is similar for 2018 to 2023 (rho = -0.07, p = 0.58) and 2022 to 2024 (rho = -0.04, p = 0.77). This agrees with Part 2, Section 3.1.

Funding position going into FY2026

The FY2026 Estimated Annual Renewal Demand (ARD) Report gives each CoC's renewal demand and its preliminary pro rata need (PPRN), a formula estimate of need. The FY2024 award divided by PPRN shows funding position relative to that formula. Part 2, Section 3.3 found that this ratio mostly reflects the size of existing renewal grants and is not related to performance.

CoC	FY2024 award	FY2026 estimated ARD	PPRN	FY2024 award / PPRN
Detroit (MI-501)	$40.2M	$38.8M	$43.5M	0.92x
Cleveland/Cuyahoga (OH-502)	$53.2M	$57.2M	$35.7M	1.49x
Georgia Balance of State (GA-501)	$38.3M	$39.5M	$30.7M	1.25x

Source: HUD FY2026 CoC Estimated Annual Renewal Demand Report; HUD FY2024 awards.

The award history does not show funding rising with performance for these three CoCs. Detroit trailed national growth in five of six intervals, Cleveland outpaced it in four, and Georgia's increase is concentrated in one year. Because the competitive portion of awards is not published, the data cannot show whether performance earned any part of these amounts.

7. Reading this together

- **Detroit is the firmest case.** Its HMIS view is nearly complete, and its gains are large and concentrated in 2024. The documents describe coordinated entry and Housing First practices.

- **Cleveland is mixed.** It improved in most intervals on returns and exits, but its coverage shifted during the period and its levels on exits and income are no better than 2018.
- **Georgia is the least firm.** Its HMIS view is partial (shelter, transitional housing and PSH coverage are below 85%, though it reports coverage rising since 2024), and its interval gains are small.
- **Funding did not follow performance in a consistent way.** Detroit's award trailed national growth in five of six intervals, Cleveland's beat it in four, and Georgia's rose in one year (Section 6). Across 72 CoCs, improvement shows no link to award growth.

Appendix: supporting tables

These tables reproduce the calculations behind Part 2. They show how the sample was built, how each measure was defined, and the full results for each analysis, including tests that are summarized only in part in the text.

A1. Sample and classification

Item	Count	Note
CoCs in the HUD data	375	All CoCs with SPM, PIT and award data, 2022-24
Major City CoCs analyzed	48	HUD category "Major City CoC" in the 2024 SPM file; MO-604K excluded ($0 2024 award, no SPM or PIT data of its own)
UFAs / non-UFAs	18 / 357	UFA = a value in the "UFA Costs" column of the FY2026 Estimated ARD Report
Collaborative Applicant type, all CoCs	Gov. 164; nonprofit 124; public authority 10; review 59; no planning grant 18	Review = ambiguous name, excluded from tests. No planning grant = no planning project in the FY2024 award file (8 Florida CoCs, NC-501, TN-509 and TX-624 have no rows at all)
Collaborative Applicant type, Major City CoCs	Gov. 21; nonprofit 23; JPAs 2; no planning grant 2	JPA Public authorities: LAHSA and the King County Regional Homelessness Authority. No planning grant: El Paso and Tampa
Adjusted PIT results exclude	NY-600, IL-510, CO-503	Part of their 2024 sheltered increase reflects asylum-seeker sheltering (HUD 2024 AHAR; HUD press release pr24-327)

A2. Definitions of measures

Measure	Definition
Award growth 2022-24	Award 2024 divided by award 2022, minus 1. CoCs with no 2022 award are excluded. Award = HUD CoC award amount in the SPM file.
Cumulative growth 2019-22 and 2019-24	Award in the end year divided by the 2019 award, minus 1.
PIT change 2022-24	PIT count (overall homeless) 2024 divided by 2022, minus 1.
Award per person counted	Award divided by the PIT count of the same year.
Award / PPRN	FY2024 award divided by FY2026 Preliminary Pro Rata Need (PPRN) from the FY2026 Estimated ARD Report.
SPMs improved (of 5)	Count of SPM 1, 2, 4, 5 and 7 that moved in the better direction from 2022 to 2024. A missing value counts as not improved. A simple tally, not a HUD score.
First-time homeless change	SPM 5 value for 2024 divided by the 2022 value, minus 1. Lower is better.
HMIS participation	HIC HMIS participation rate for emergency shelter, transitional housing and safe haven (ES/TH/SH) beds, 2024.
PSH + RRH beds per person counted	Year-round permanent supportive housing plus rapid re-housing beds (HIC, 2024) divided by the 2024 PIT count.
Collaborative Applicant	Recipient of the CoC planning project in the HUD FY2024 award list (or the CoC registration project where there is no planning project; in a UFA, the UFA costs recipient). Type was set from the organization name: government = city, county, state, housing authority or department; nonprofit = incorporated nonprofit, coalition, alliance, United Way and similar.

SPM 1 = median days homeless (lower is better); SPM 2 = returns to homelessness within 24 months (lower); SPM 4 = leaver income (higher); SPM 5 = first-time homeless (lower); SPM 7 = exits to permanent housing (higher).

A3. Funding growth and outcomes, 48 Major City CoCs (Section 3.1)

Outcome	Award growth: rho	p	Award per person: rho	p	Adj. growth: rho	p	Adj. per person: rho	p
PIT change 2022-24	-0.29	0.045	-0.35	0.015	-0.19	0.221	-0.27	0.078
SPM 1 median days change	0.00	0.979	-0.16	0.285	0.09	0.538	-0.07	0.626
SPM 2 returns change	0.06	0.704	0.01	0.947	0.01	0.952	-0.07	0.671
SPM 5 first-time homeless change	-0.35	0.015	-0.25	0.086	-0.31	0.037	-0.18	0.233
SPM 7 exits to PH change	0.18	0.232	0.03	0.860	0.19	0.202	0.05	0.722
SPM 4 income change	-0.21	0.154	0.01	0.964	-0.23	0.131	-0.02	0.908
SPMs improved (of 5)	0.19	0.201	0.30	0.038	0.20	0.198	0.32	0.032

Spearman rank correlations. Adjusted columns exclude New York City, Chicago and Denver (n = 45). With 7 outcomes and 2 funding measures (14 tests), about one result is expected to reach p < 0.05 by chance. Award per person uses the 2024 PIT count, so its link to PIT change is partly built in; its link to SPMs improved is not.

A4. Collaborative Applicant type (Section 3.2)

Classification of the 48 Major City CoCs. "Name rule" = classified automatically from the organization name; "Manual review" = each Major City CoC was reviewed individually. The recipient is the HUD recipient of the planning project.

Code	CoC	Planning-grant recipient (HUD FY2024)	Type	Basis
AZ-501	Tucson/Pima County CoC	City of Tucson	Government	Name rule
CA-500	San Jose/Santa Clara City & County CoC	County of Santa Clara by and through Office of Supportive Housing	Government	Name rule
CA-501	San Francisco CoC	City and County of San Francisco Project Applicant	Government	Name rule
CA-502	Oakland, Berkeley/Alameda County CoC	Alameda County	Government	Name rule
CA-514	Fresno City & County/Madera County CoC	Housing Authority City of Fresno	Government	Name rule
CA-606	Long Beach CoC	City of Long Beach CA 606	Government	Name rule
FL-600	Miami-Dade County CoC	Miami-Dade County	Government	Name rule
IN-503	Indianapolis CoC	City of Indianapolis	Government	Name rule
MA-500	Boston CoC	City of Boston	Government	Name rule
MD-501	Baltimore CoC	City of Baltimore - Mayor's Office	Government	Name rule
MN-500	Minneapolis/Hennepin County CoC	Hennepin County	Government	Name rule
NC-505	Charlotte/Mecklenberg CoC	Mecklenburg County	Government	Name rule
NM-500	Albuquerque CoC	City of Albuquerque	Government	Name rule
NV-500	Las Vegas/Clark County CoC	Clark County	Government	Name rule
NY-600	New York City CoC	The City of New York Department of Homeless Services	Government	Manual review
OK-502	Oklahoma City CoC	City of Oklahoma City	Government	Name rule
OR-501	Portland, Gresham/Multnomah County CoC	County of Multnomah	Government	Name rule
PA-500	Philadelphia CoC	City of Philadelphia	Government	Name rule
TN-504	Nashville/Davidson County CoC	Metropolitan Development & Housing Agency	Government	Name rule
VA-503	Virginia Beach CoC	City of Virginia Beach	Government	Name rule
WI-501	Milwaukee City & County CoC	City of Milwaukee	Government	Name rule
AZ-502	Phoenix, Mesa/Maricopa County CoC	Maricopa Association of Governments	Nonprofit	Manual review
CA-503	Sacramento City & County CoC	Sacramento Steps Forward	Nonprofit	Manual review
CA-601	San Diego City and County CoC	Regional Task Force on the Homeless Inc.	Nonprofit	Name rule
CA-604	Bakersfield/Kern County CoC	Bakersfield Kern Regional Homeless Collaborative	Nonprofit	Name rule
CO-503	Metropolitan Denver CoC	Metro Denver Homeless Initiative	Nonprofit	Name rule

Code	CoC	Planning-grant recipient (HUD FY2024)	Type	Basis
CO-504	Colorado Springs/El Paso County CoC	Community Health Partnership	Nonprofit	Manual review
DC-500	District of Columbia CoC	The Community Partnership for the Prevention of Homelessness	Nonprofit	Name rule
FL-510	Jacksonville-Duval, Clay Counties CoC	Changing Homelessness Inc.	Nonprofit	Name rule
GA-500	Atlanta CoC	Partners for HOME, Inc.	Nonprofit	Name rule
IL-510	Chicago CoC	All Chicago Making Homelessness History	Nonprofit	Manual review
KY-501	Louisville-Jefferson County CoC	Coalition for the Homeless, Inc.	Nonprofit	Name rule
MI-501	Detroit CoC	Homeless Action Network of Detroit	Nonprofit	Name rule
MO-604	Kansas City/Independence/Lee's Summit/Jackson County CoC	Greater Kansas City Coalition to End Homelessness	Nonprofit	Manual review
NC-507	Raleigh/Wake County CoC	Haven House Inc.	Nonprofit	Name rule
NE-501	Omaha, Council Bluffs CoC	Metro Area Continuum of Care for the Homeless, dba Threshold CoC	Nonprofit	Manual review
OH-503	Columbus/Franklin County CoC	Community Shelter Board	Nonprofit	Name rule
OK-501	Tulsa City & County CoC	The Center for Housing Solutions, Inc.	Nonprofit	Name rule
TN-501	Memphis/Shelby County CoC	Community Alliance for the Homeless	Nonprofit	Name rule
TX-500	San Antonio/Bexar County CoC	South Alamo Regional Alliance for the Homeless, dba Close to Home	Nonprofit	Name rule
TX-503	Austin/Travis County CoC	Ending Community Homelessness Coalition, Inc.	Nonprofit	Name rule
TX-600	Dallas City & County/Irving CoC	Housing Forward	Nonprofit	Name rule
TX-601	Fort Worth/Arlington/Tarrant County CoC	Tarrant County Homeless Coalition	Nonprofit	Manual review
TX-700	Houston, Pasadena, Conroe/Harris, Ft. Bend, Montgomery, Counties CoC	Coalition for the Homeless of Houston/Harris County	Nonprofit	Manual review
CA-600	Los Angeles City & County CoC	Los Angeles Homeless Services Authority	JPA/Public authority	Manual review
WA-500	Seattle/King County CoC	King County Regional Homelessness Authority	JPA/Public authority	Manual review
FL-501	Tampa/Hillsborough County CoC	None in award file	No planning grant	Name rule
TX-603	El Paso City & County CoC	None in award file	No planning grant	Name rule

JPAs are shown separately and excluded from the government vs. nonprofit tests (see sensitivity table below).

Measure	Gov. n	Gov. median	Nonprofit n	Nonprofit median	Mann-Whitney p
Award growth 2022-24	21	26.2%	23	36.2%	0.031
SPMs improved 2022-24 (of 5)	21	2	23	2	0.055
PIT change 2022-24	21	9.3%	22	16.5%	0.913
PIT change 2022-24, excl. NY-600, IL-510, CO-503	20	8.3%	20	9.2%	0.715
Exits to permanent housing, 2024	21	33.8%	23	28.6%	0.724
Returns to homelessness within 24 mo, 2024	21	17.4%	23	20.8%	0.100
First-time homeless change 2022-24	21	12.3%	23	-2.9%	0.007
HMIS participation (ES/TH/SH), 2024	21	87.5%	23	89.0%	0.778
Award / PPRN, 2024	21	1.21x	23	1.32x	0.944

Major City CoCs, medians. Government-led n = 21 and nonprofit-led n = 23; n is lower in a row where a CoC has a missing value.

Measure	Gov. n	Gov. median	Nonprofit n	Nonprofit median	Mann-Whitney p
Award growth 2022-24	163	25.3%	121	26.9%	0.192
SPMs improved 2022-24 (of 5)	164	2	124	2	0.128
PIT change 2022-24	164	18.0%	123	22.6%	0.387
PIT change 2022-24, excl. NY-600, IL-510, CO-503	163	17.9%	121	22.3%	0.467
Exits to permanent housing, 2024	164	38.4%	124	33.6%	0.433
Returns to homelessness within 24 mo, 2024	164	15.5%	124	17.1%	0.067
First-time homeless change 2022-24	163	8.1%	124	-2.7%	0.002
HMIS participation (ES/TH/SH), 2024	164	80.6%	124	74.1%	0.076
Award / PPRN, 2024	164	1.11x	124	1.14x	0.250

All CoCs with a classified recipient.

Outcome	n	Government coefficient	Std. error	p
Award growth 2022-24	283	+13.5	10.3	0.194
SPMs improved (of 5)	287	-0.15	0.13	0.275
PIT change 2022-24	287	-3.3	6.0	0.582
Exits to permanent housing, 2024	287	+2.6	2.0	0.193
Returns to homelessness, 2024	287	-2.3	0.8	0.005
First-time homeless change 2022-24	286	+7.4	5.8	0.199

Government-led vs. nonprofit-led, adjusted for size (log 2024 PIT; log 2022 PIT for PIT change, because the 2024 count is part of that outcome), CoC category and HMIS participation (OLS). Coefficients are percentage points except SPMs improved (count).

Measure (Major City)	JPAs excluded	JPAs as government	JPAs as nonprofit
Award growth 2022-24	0.031	0.028	0.042
SPMs improved 2022-24 (of 5)	0.055	0.041	0.083
PIT change 2022-24	0.913	0.883	0.991
Exits to permanent housing, 2024	0.724	0.568	0.895
Returns to homelessness within 24 mo, 2024	0.100	0.053	0.140
First-time homeless change 2022-24	0.007	0.005	0.014

Where the two JPAs (LAHSA and the King County Regional Homelessness Authority) are placed changes the p-values only slightly.

A5. UFA vs. non-UFA CoCs (Section 3.3)

Measure	UFA n	UFA median	Non-UFA n	Non-UFA median	Mann-Whitney p
Award / PPRN, 2024	18	1.37x	357	1.06x	0.099
Award per person counted, 2024 PIT	18	$6,646	356	$4,936	0.115
Award growth 2022-24	18	28.9%	352	25.2%	0.406
SPMs improved 2022-24 (of 5)	18	2	357	2	0.218
Returns to homelessness within 24 mo, 2024	18	13.3%	357	15.8%	0.560
Exits to permanent housing, 2024	18	38.4%	357	37.1%	0.880
PIT change 2022-24	18	34.8%	356	19.3%	0.047

Group comparison, 18 UFAs vs. 357 non-UFAs. Award growth excludes five non-UFA CoCs with no 2022 award (n = 352).

Outcome	UFA coefficient	Std. error	Unit	p
SPMs improved (of 5)	-0.30	0.26	SPMs (count)	0.246
PIT change 2022-24	+18.9	11.1	percentage points	0.089
Award / PPRN, 2024	+0.13	0.25	ratio points	0.607

Adjusted for size and CoC category (OLS, n = 374). Size is log 2024 PIT, except for PIT change, where it is log 2022 PIT because the 2024 count is part of the outcome. A positive coefficient is a higher value for UFAs.

Relationship (Spearman)	Group	n	rho	p
Award / PPRN vs. SPMs improved	UFA	18	0.50	0.035
Award / PPRN vs. SPMs improved	Non-UFA	357	-0.05	0.362
Award / PPRN vs. PIT change 2022-24	UFA	18	-0.03	0.893
Award / PPRN vs. PIT change 2022-24	Non-UFA	356	-0.10	0.054

Spearman correlations within each group. The only nominal result (UFAs, SPMs improved) is one of about eight tests on 18 CoCs.

Relationship (Spearman)	n	rho	p
Award / PPRN vs. renewal demand (ARD) / PPRN	375	0.99	<0.001
Award / PPRN vs. SPMs improved 2022-24	375	-0.04	0.426
Award / PPRN vs. PIT change 2022-24	374	-0.09	0.069
Award / PPRN vs. first-time homeless change 2022-24	374	0.14	0.008
Same, 48 Major City CoCs: award / PPRN vs. SPMs improved	48	-0.06	0.692

Award relative to PPRN tested against performance. Award / PPRN is almost identical to renewal demand / PPRN (rho = 0.99), so it measures funding position rather than performance.

A6. HMIS participation and permanent housing capacity (Section 3.4)

HIC measure	Outcome	N – all COCs	rho	p	N – major cities	rho	p
HMIS participation rate (2024)	SPMs improved 2022-24 (of 5)	375	-0.08	0.138	48	-0.07	0.651
HMIS participation rate (2024)	PIT change 2022-24	374	0.04	0.455	47	-0.10	0.523
HMIS participation rate (2024)	Exits to permanent housing, 2024	375	-0.16	0.002	48	-0.14	0.350
HMIS participation rate (2024)	Returns to homelessness, 2024	375	0.26	<0.001	48	0.28	0.050
Change in HMIS participation, 2022-24	SPMs improved 2022-24 (of 5)	375	-0.05	0.309	48	-0.02	0.900
Change in HMIS participation, 2022-24	PIT change 2022-24	374	-0.01	0.876	47	-0.20	0.177
Change in HMIS participation, 2022-24	Exits to permanent housing, 2024	375	-0.09	0.066	48	-0.04	0.813
Change in HMIS participation, 2022-24	Returns to homelessness, 2024	375	0.06	0.256	48	0.03	0.817
PSH + RRH beds per person counted, 2024	SPMs improved 2022-24 (of 5)	374	0.05	0.377	47	0.07	0.618
PSH + RRH beds per person counted, 2024	PIT change 2022-24	374	-0.16	0.002	47	-0.22	0.140
PSH + RRH beds per person counted, 2024	Exits to permanent housing, 2024	374	0.14	0.007	47	0.03	0.840
PSH + RRH beds per person counted, 2024	Returns to homelessness, 2024	374	0.06	0.270	47	0.04	0.802
Growth in PSH + RRH beds, 2022-24	SPMs improved 2022-24 (of 5)	372	-0.07	0.200	48	-0.02	0.875
Growth in PSH + RRH beds, 2022-24	PIT change 2022-24	371	0.00	0.966	47	0.07	0.637
Growth in PSH + RRH beds, 2022-24	Exits to permanent housing, 2024	372	-0.01	0.844	48	0.03	0.824
Growth in PSH + RRH beds, 2022-24	Returns to homelessness, 2024	372	0.07	0.188	48	-0.11	0.439

Spearman correlations, 2022-24. 16 relationships are tested in each group, so about one in twenty is expected to reach $p < 0.05$ by chance. The link between permanent housing beds per person and PIT change is mechanical (the 2024 PIT count is in both measures). The link between HMIS participation and returns is likely because CoCs that capture more of their system detect more returns.

Measure	UFA n	UFA median	Non-UFA n	Non-UFA median	Mann-Whitney p
HMIS participation rate, ES/TH/SH beds, 2024	18	86.1%	357	77.1%	0.465
Change in HMIS participation, 2022-24	18	0.3%	357	0.4%	0.753
PSH + RRH beds per person counted, 2024	18	0.97	356	0.76	0.059
Growth in PSH + RRH beds, 2022-24	18	7.5%	354	-0.9%	0.185

UFA vs. non-UFA: HMIS participation and permanent housing capacity. PSH + RRH beds per person counted shown as a ratio.

A7. Housing market conditions and outcomes (Section 3.6)

Each Major City CoC was matched by name to the JCHS metropolitan area that contains it. The market measures come from JCHS America's Rental Housing 2026, Tables W-14 (rent, vacancy, rent distribution), W-17 (cost burden by income) and W-18 (rental units by contract rent). Units under $1,000 are the three bands below $1,000; the per-household ratio divides them by renter households with incomes under $30,000.

CoC	Metropolitan area (JCHS)	Median gross rent	Units under $1,000	Units under $1,000 per renter HH under $30K	Severe burden, all	Severe burden, under $15K	Vacancy	Days homeless 2024
AZ-501	Tucson, AZ	$1,300	37%	1.35	25.6%	82%	6.7%	59
AZ-502	Phoenix-Mesa-Chandler, AZ	$1,810	12%	0.63	25.9%	84%	8.6%	85
CA-500	San Jose-Sunnyvale-Santa Clara, CA	$2,850	7%	0.53	21.4%	73%	4.7%	134
CA-501	San Francisco-Oakland-Fremont, CA	$2,450	11%	0.60	25.4%	76%	6.5%	134
CA-502	San Francisco-Oakland-Fremont, CA	$2,450	11%	0.60	25.4%	76%	6.5%	165
CA-503	Sacramento-Roseville-Folsom, CA	$1,904	12%	0.53	31.7%	84%	6.2%	131
CA-514	Fresno, CA	$1,517	32%	1.00	31.9%	75%	4.6%	93
CA-600	Los Angeles-Long Beach-Anaheim, CA	$2,110	11%	0.53	30.1%	81%	4.5%	149
CA-601	San Diego-Chula Vista-Carlsbad, CA	$2,330	7%	0.44	29.5%	84%	4.7%	96
CA-604	Bakersfield-Delano, CA	$1,460	40%	1.26	30.8%	84%	4.8%	61

Days homeless is SPM 1 (ES, SH and TH median days), 2024. Six CoCs share three metropolitan areas: CA-501 and CA-502 (San Francisco-Oakland-Fremont), CA-600 and CA-606 (Los Angeles-Long Beach-Anaheim), TX-600 and TX-601 (Dallas-Fort Worth-Arlington).

Sensitivity of the main results. The six nominal results from Section 3.6, run on all 48 CoCs, without New York City, Chicago and Denver, and with one CoC per metropolitan area.

Relationship (Spearman)	All 48 Major City CoCs	Excl. NYC, Chicago, Denver (n = 45)	One CoC per metro area (n = 45)
Median gross rent vs. days homeless	+0.65, $p < 0.001$	+0.66, $p < 0.001$	+0.64, $p < 0.001$
Share of units under $1,000 vs. days homeless	-0.56, $p < 0.001$	-0.61, $p < 0.001$	-0.56, $p < 0.001$
Units under $1,000 per low-income renter household vs. days homeless	-0.58, $p < 0.001$	-0.62, $p < 0.001$	-0.59, $p < 0.001$
Vacancy rate vs. days homeless	-0.33, $p = 0.022$	-0.29, $p = 0.049$	-0.32, $p = 0.032$
Median gross rent vs. PH retention	+0.35, $p = 0.014$	+0.33, $p = 0.025$	+0.32, $p = 0.030$
Severe burden under $15,000 vs. PH retention	-0.37, $p = 0.010$	-0.33, $p = 0.026$	-0.32, $p = 0.034$

Spearman rho, p-value. SPM 7b.2 (PH retention) is the share of persons in permanent housing, other than rapid re-housing, who stayed or exited to a permanent destination; it is averaged over 2022-24.
